

Card Grid Layout

Using CSS Grid with min-width, max-width, and max-height Properties

Responsive Card Grid

This grid automatically adjusts the number of cards based on screen size. Each card maintains a minimum width of 300px and maximum width of 400px.

How It Works

grid-template-columns: repeat(auto-fit, minmax(300px, 1fr))

This creates a responsive grid where each column has a minimum width of 300px and maximum width of 1fr (equal share). Cards automatically reflow when the screen is too narrow to fit the minimum width.

.card { min-width: 0; }

This is critical for preventing text overflow inside flex and grid items. Without it, long titles and text can break out of the card.

.card { max-width: 400px; }

On large screens (1920px+), this prevents cards from becoming too wide. They stop growing at 400px, maintaining a compact, readable layout.

.card-image { max-height: 250px; object-fit: cover; }

Images maintain consistent height (250px max) regardless of their original dimensions. The object-fit: cover ensures they fill the space without distortion.

Responsive Behavior

The grid automatically adjusts based on screen width:

Mobile (< 768px)

Cards per row: 1

Card width: Full width (100%)

Constraint: Responsive to viewport

Tablet (768px - 1024px)

Cards per row: 2-3

Card width: 300-400px

Constraint: Respects min-width

Desktop (> 1024px)

Cards per row: 3-4

Card width: Capped at 400px (max-width)

Constraint: min-width: 0 + max-width: 400px

CSS Code Reference

```
.card-container {
display: grid;
grid-template-columns: repeat(auto-fit, minmax(300px, 1fr));
gap: 20px;
}
.card {
min-width: 0; /* Prevents text overflow inside card */
max-width: 400px; /* Caps card size on huge screens */
border: 1px solid #ddd;
padding: 20px;
}
.card-image {
width: 100%;
max-height: 250px; /* Image doesn't stretch too tall */
object-fit: cover; /* Maintains aspect ratio */
}
.card-title {
max-width: 100%; /* Prevents text from breaking layout */
overflow: hidden;
text-overflow: ellipsis;
}
```

Property Reference

Property	Value	Purpose
min-width	0	Allows card content to shrink without breaking text
max-width	400px	Prevents card from exceeding 400px on large screens
max-height (image)	250px	Keeps images at consistent height without stretching
object-fit	cover	Maintains aspect ratio while filling the image container

Resize your browser to see the responsive grid in action. Cards automatically reflow based on available space.
